

AUTO SECURITY **COMPUTRACK**

GPS VEHICLE LOCATION MINI-INSTALL GUIDE

MAKE SURE YOU WRITE THE UNIT'S 20 DIGIT SERIAL NUMBER IN THE RED BOX BELOW.

This is a self-contained GPS/Cellular vehicle tracking product that requires just 2 wires, power and ground for the basic installation. Computrack is a miracle of massively small proportions.

You will need the customer's information as show below and the unit's 20 Serial Number found on the unit's label. Use the space to the right below to write down the customer's information.

To set up the unit's service on-line at WWW.ComputrackLive.com. Click on "Register here".

AutoVantageGPS unit information	
20 digit Serial Number as on the label *	<input type="text"/>

The Cell/GPS antennas are built into the unit, do not open! The easiest mounting location is under the passenger or rear seat (label side up) or within the seat back (label side facing forward). The

unit may alternately be mounted just below the non-metallic dash pad (above glove box; example). Position the unit at its final mounting location (label side up) with the wiring harness routed to the power and ground points. Any unit contact with or shrouded by metal may reduce radio signals.

Full-time power is connected to the fused RED wire from the power seat switch or similar full-time power circuit. Ground the unit's BLACK wire to grounded metal such as the seat frame. The other harness wires are for other features discussed in the advanced installation guide.

The vehicle must be outside in full view of the sky and away from buildings for the first power-up and testing. Insert the indexed wire harness plug into the front of the tracking unit receptacle. The GREEN and RED LEDs will flash. Shortly, the GREEN LED will change to steady showing you that you have acquired Cellular signal lock. In a few moments the RED LED will change to steady showing that you have acquired GPS signal lock and the satellite information has been recorded in the unit's location memory. Please be patient, you may have to repeat this process.

Place the unit in its intended mounting place, the LEDs must remain on steadily for 3 minutes. Secure the tracking unit with wire ties, screws or good quality double-faced tape. Make sure the unit is hidden from view, does not interfere with any mechanisms. Do not leave it lying loose; doing so may cause unintended vibration during vehicle travel.

Final Test – Go to www.ComputrackLive.com and fill in the customer's e-mail ID and 1234 password at the existing customer login and click: . You will now be at the customer's home screen. Go to the far right column and click on "Control" for the vehicle. Then click on

 and confirm the request. Shortly, you will receive a new location message: 

This confirms the unit is operating properly.

The Features You Have Just Installed

- | | | |
|--------------------------|------------------------------|----------------------------|
| 1) Locate vehicle | 6) Built-in back-up battery | 11) Curfew mode |
| 2) Low battery alert | 7) Battery disconnect notice | 12) History detail |
| 3) Tow away notification | 8) Live tracking | 13) Secure web site |
| 4) Geo-fence warning | 9) Points-of-Interest | 14) Secure cell access |
| 5) Over-speed signal | 10) Service reminders | 15) Instant account status |

Congratulations, You're Done!

When desiring to locate the vehicle from the Internet, log in at the AutoVantagegps.com web site; enter the e-mail address and password.
